

# GAUGELink

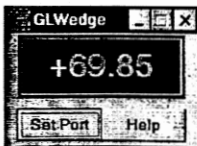

Connects Mitutoyo gauge  
directly to PC

GaugeLink is an easy to use adaptor that allows you to send readings from any Mitutoyo Digimatic™ measuring instrument straight into your PC.

- Easy to use
- Uses standard COM port
- Software included (keyboard wedge)
- Optional footswitch
- No power connection needed
- Works with any Windows program

With GaugeLink you will eliminate tedious and error prone manual entry of gauge data. Simply connect your Mitutoyo Digimatic™ gauge to GaugeLink using a Mitutoyo cable, connect the GaugeLink to your computer's COM port and you will never have to type in a reading again.

An optional footswitch gives you a virtual third hand. Using a hand-held gauge on awkward parts? The footswitch is the answer.

GLWedge screen shot

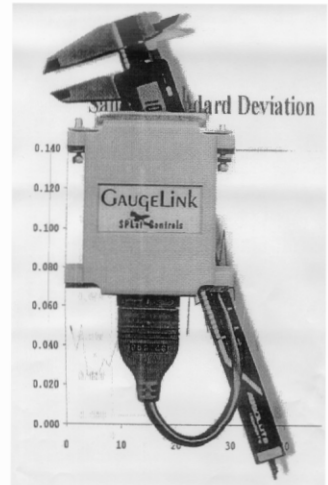

Software is no problem with GaugeLink. GaugeLink comes complete with our GLWedge program, an easy to use utility that will transfer gauge readings straight into *any* Windows program, making the program think it was typed on the keyboard.

If you have a 4-channel COM port card, you can even have 4 copies of GLWedge running, and interface 4 gauges simultaneously.

The data format directly out of GaugeLink is also compatible with most SPC packages that support direct gauge input.

#### Ordering

Order by description: GaugeLink adaptor (including GLWedge software), optional footswitch.

*The GaugeLink connects to your vernier caliper using a Mitutoyo cable. The other end of the GaugeLink (top) fits directly into a 25 pin COM port connector on your computer.*
